## **ACADEMIC PROJECTS:**

### **1. PG FINDER**

**PLATFORM:** MEAN, iOS

**DURATION:** 1 MONTH

**DESCRIPTION:** PG finder is an application to find PG, Express for backend, Angular for web and iOS for mobile application. MySQL is used for database. PG finder is beneficial for user to find PG in new cities. User can use web or application to find PGs nearby work locations. User can book PG and pay rent online. By using this system brokers get avoided. Owners can advertise their PGs directly. I tried to develop user friendly system by designing sorted UI. This saves money and time.

## 2. USED VEHICLE PRICE PREDICTION SYSTEM

**PLATFORM:** Python, MySQL

**DURATION:** 6 MONTHS

**DESCRIPTION:** Vehicle price prediction especially when the vehicle is used and not coming direct from the factory. We used Python as front end and MySQL database. So we developed the system to predict the price of used vehicles. Client go with broker to find the second hand vehicle. The price estimated by the broker are not correct, so by using this system the brokers get avoided. This will save money and time also.

## 3. HOTEL MANAGEMENT SYSTEM

**PLATFORM:** PHP, MySQL

**DURATION:** 6 MONTHS

**DESCRIPTION:** I developed one website for hotel, that was a dynamic website. I used PHP for front end and MySQL database. Online booking facilities was provided. Client can book rooms and can order food. User can use extra facilities provided by hotel and pay accordingly. Online bill pay facility was provided.
